

Problem Set 0
Due Friday Jan. 30, 2009

Please write a one page description of your 242 project. Please follow these guidelines:

1. One or two paragraphs on the background of your research. What problem are you trying to solve? Why is this an important problem to solve?
2. A description of the specific goals for the research this semester and how it's related to what you are learning in 242.
3. List some key milestones for the research. Describe how you will conduct your research (process technology, simulation tools, etc).

Your project will be approved if it meets the guidelines for 242. While I encourage you to relate this project to your primary research, you must come up with something new and different related to 242 in order to qualify for a class project.
